Edison Breaker Panel Assemblies

All Edison Breaker Panel Assemblies use standard black CR20 20a U-Ground connectors. Breaker assemblies use Square D breakers and are wired using a standard 12g thhn (Black, White, Green). Wire leads are typically 36". Certain panels available with Neutral and Ground Buss bars. Panels available from 6cir to 24cir in multiple configurations. Panels can be wired for Three phase (Black, Red, Blue) or Single phase (Black, Red) terminations.

"Monitor Mix" style panels separate the breakers from the outputs. Breaker panels bolt to the front of the rack while the output panels bolt to the rear. A cable harness connects the two panels.

Labeling is added to both panels. Rack screws included.
